

2. Changing the Font 1

There are many ways that you can change the way the font looks in your document.

These tags all work in pairs—of course :-)

Things to try:

1. Make the font bold

Something bold will show on your screen

2. Make the font italics

<I>Something in italics will show on your screen</I>

3. Underlining text

(not used often because hyperlinks are usually shown by underlining)

<U>Something underlined will show on your screen</U>

<HTML> <BODY>	<i>We know about this stuff</i>
Writing	<i>To do something in bold</i>
<i><I>Writing</I></i>	<i>To do something in italics</i>
<u><U>Writing</U></u>	<i>To do something underlined</i>
</BODY> </HTML>	<i>We know about this stuff</i>

NOW YOU TRY:

OPEN Notepad, and make an HTML document.

USE bold, italics and underlined tags

REMEMBER: To use all tags in pairs

VIEW it in your browser.
